

REQUEST FOR BIDS

Supply and Install Network Video Recorder

DULUTH TRANSIT AUTHORITY

Addendum #2

September 1, 2021

1. Clarifications:

The Duluth Operations Center, 2402 West Michigan Street, is currently on Standard Version 6 Avigilon software, the Duluth Transportation Center at 228 West Michigan Street is on Enterprise Version 6 Avigilon software currently.

2. The Contractor is responsible for bringing a man lift for all work contemplated in this contract, and shall include the cost of the lift in the bid price.

3. There is no need for a spare port on the network server since we will be removing the existing server and installing a new one.

4. There is room on the patch panel for an additional camera. The location of the new camera is within 300 feet of the technology cabinet. The camera will be mounted in the bus storage area where there is a dropped ceiling. There are structural girders to attach a drop down for the camera if needed. The new camera will require new wiring, no existing wiring will be used. A tray is not required for the wiring above the ceiling. The license for the new camera will be transferred from an exterior camera that is no longer in use.
